Task 2 — Product Detail Page with Sticky Details Box

Objective

To redesign the existing product detail page using CSS Grid, named grid-template-areas and sticky positioning while maintaining responsive behaviour.

Personal Values

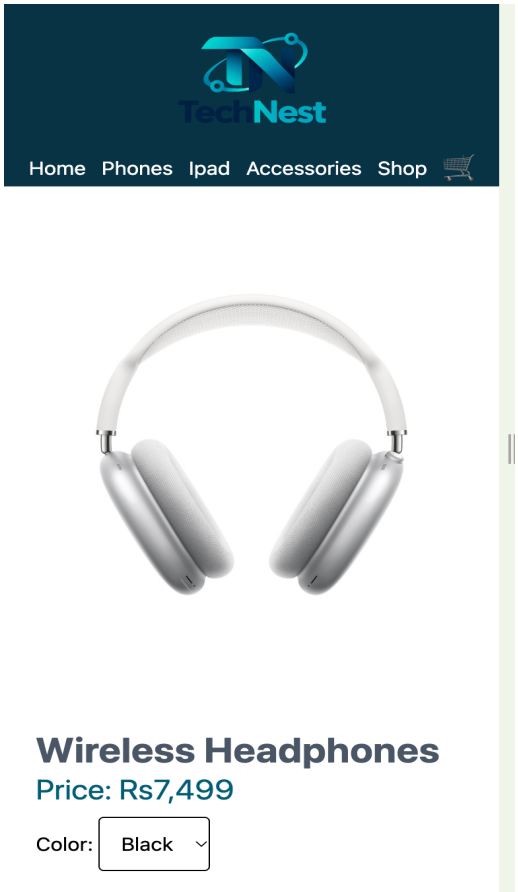

- Registration Number: FA24-BCS-100
- N = 0
- Breakpoint (BP) = 600px

- Sticky Top Offset = 70px

Implementation

1. Created a CSS Grid layout for the product page.
2. Used named grid areas: image, details and description.
3. Desktop layout displays product image and details side by side.
4. Product description spans the full width below both sections.
5. Mobile layout displays all sections vertically.
6. Applied position: sticky and top: 70px to the product details section.

Product Description

Experience the freedom of wireless audio with our premium headphones. Enjoy crystal-clear sound, powerful bass, long battery life, and a comfortable fit for all-day listening. These headphones are designed for music lovers, students, professionals, and everyday users. Their lightweight design makes them comfortable to wear for extended periods. The wireless connectivity allows you to enjoy your favourite music without tangled cables. The high-quality ear cushions provide a comfortable listening experience. Whether you are working, studying, travelling, or relaxing at home, these headphones offer convenient and reliable audio performance. The rechargeable battery provides extended listening time, while the easy-to-use controls help you manage your audio experience. Choose these wireless headphones for a combination of comfort, style, and everyday functionality

STICKINESS

After scrolling

Task 3 — JavaScript: Live Search and Price Sort

Objective

Implement live product search, combined category filtering, alternating price sorting and dynamic Premium labels using plain JavaScript.

Features Implemented

1. Live search using the input event.
2. Case-insensitive product name matching.
3. Combined category and search filtering.
4. No products found message when no cards match.
5. Alternating ascending and descending price sorting.
6. Existing product cards reordered using appendChild().
7. Dynamic Premium labels created when the page loads.

Personal Calculation

N = 0

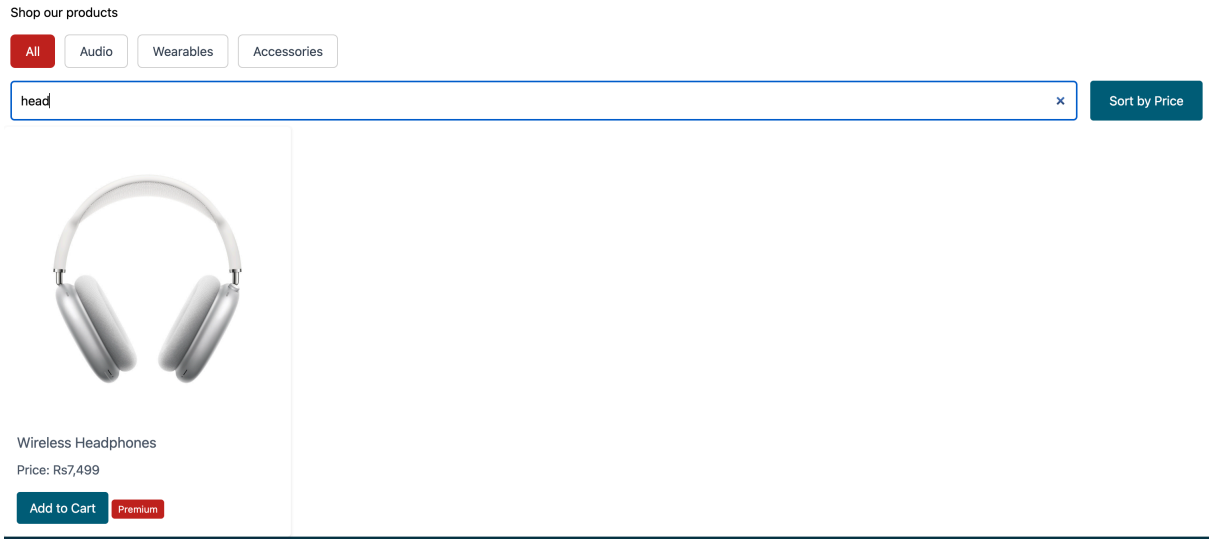

Premium threshold = N × 100 = Rs0.

All eight products have prices greater than Rs0 and therefore qualify for the Premium label.

Technologies

HTML5, CSS3, Tailwind CSS and Vanilla JavaScript.
